KeySampler · PCR-M30 template · sheet 1 of 2 (left half)

Trim this sheet along the orange dashed line. Lay it over sheet 2 so the orange crosses line up, and tape it on the back.

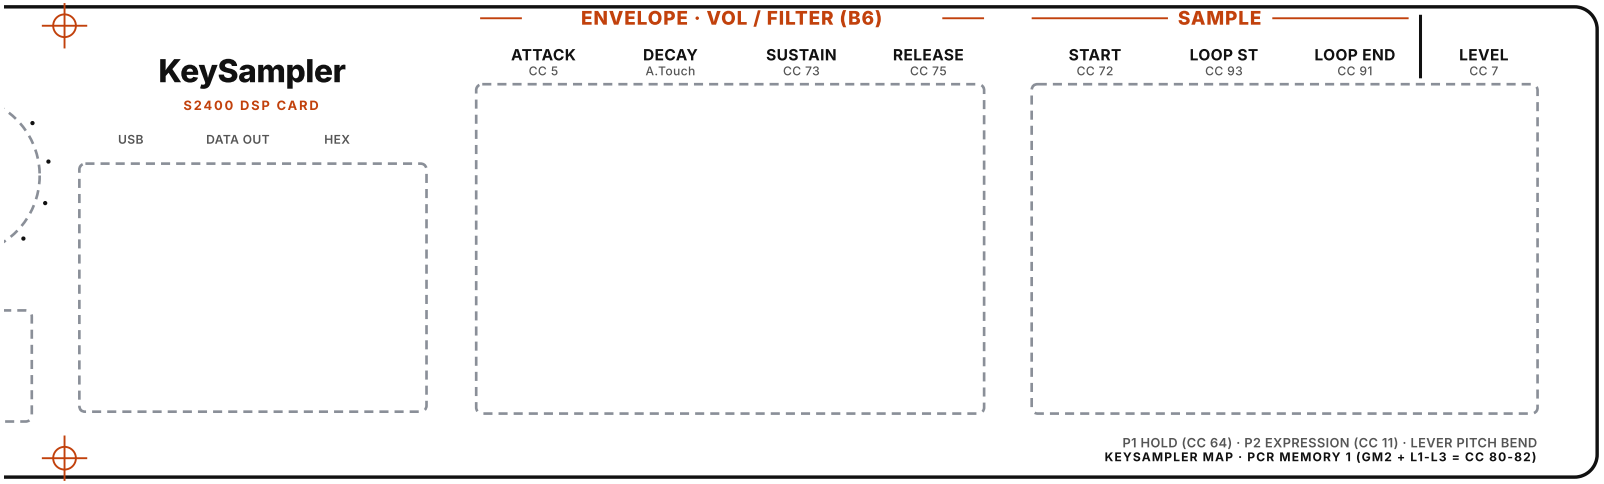

1. Check the print scale. The bar above must measure exactly 100 mm (print at "actual size" / 100 %). On this mask the R1–R8 knob centres are 175 mm apart. Measure R1 to R8 on your PCR (centre to centre); if it differs, print again at **your measurement ÷ 175 × 100 %**.

2. Cut along the outer edges and the grey dashed lines (knob holes, windows for the buttons, display and sliders). The small card goes over L1–L3.

Key: black = KeySampler function; grey = control and the message the PCR sends (GM2 set, with L1-L3 set to CC 80-82 and saved as memory 1); orange = groups and Record. The window marked "PCR keyboard buttons" keeps its normal PCR functions.

KeySampler · PCR-M30 template · sheet 2 of 2 (right half)

Keep this sheet whole; sheet 1 overlaps it up to the orange crosses.
